Special Thanks

It was a great time at university which brought the goods and bads of \LaTeX to my knowledge. Now i do not even know whom to thank.

Chapter one: How to use this

"WoDTeX can be used to make thing nicer and is a handy L^AT_EXClass"
-Lukas Ester

This class is simple to use. I reworked the headlines to correspond to the WoD Format. You should use the *-version for chapter, section, subsection and subsubsection. additionally there is a command `\chapterCiting{Cite}{Person}` to add the citing at each beginning of a chapter. the other commands are listed below. just inspect the .tex document of this file to get more insight on the usage.

How to Start

the first line should be `\documentclass[english,LQ]{WoDTeX}` where the first option is the language(ngerman and german are also supported) and the second option can either be LQ or HQ for Low or High Quality.

The Front

to start the document it is highly recommended to add a cover page by the command `\FrontCover{Title}{Image}` where the image can even be a tikzpicture or just text.

The Credits

the command `\CreditsPage{Author}{Developer}{Editor}{Special Thanks to}` creates the creditspage containing the logos and disclaimer by whitewolf

Framed Text

the command `\WoDFrame{text}` creates the separator frame around the text:

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like "Huardest gefburn"? Kjift - not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

General Settings

as seen in this .tex file you should set the chapter counter to zero at the start of the document to start with chapter one. you can also set `\twocolumn\sloppy`. due to font issues you need to set your tex compiler to XeLaTeX.

Missing Features

there are still not all features provided within this class. i will update this product in the next time to complete it. If you encounter errors or have feature requests please contact me (lester@techfak.uni-bielefeld.de).

Identified Missing Feature:

- Table of contents
- back cover

The Folder Structure

In the same Folder as the newly created Document, there should be the `WoDTeX.cls`, the `wodGlyphs.sty` and the Backgrounds Folder from the zip. Containing the ressource Images. There is also the glyphs folder, containing about 250 Glyphs. Best practice is to create an extra folder for the other images of your project.

Glyphs

The Glyphs are not that easy to find, due to bad naming. Maybe a renaming is necessary. The current method is:

- Open the folders of the Glyphs to find the name of the file
- try \foldername (plus) filename-without-ending (example below)
- **fallback:** lookup commandname in the `wodGlyphs.sty` file

For example:

File is in `AbstActions` and filename is `Birth.png` →
`\AbstActionsBirth`
